

# COVID-19 Patient Detection with Chest X-Ray

Prepared by:

**Syeda Mishra Saiara**  
**Fahim Arsad Nafis**

**Warning!**

This Project is for Educational Purpose.  
Diagnosing COVID-19 Patient is  
NOT Advised.

01

# Motivation

213+

Countries  
affected

29,729,993

Cases Detected

939,674

Death Cases

# What Motivates Us?

Insufficient Medical  
Resources of  
Bangladesh

01

02

Easier, Cheap and Fast  
Detection System

Aim to Avoid False Positive  
& False Negative Result

03

02

## Existing Solutions

# Present Detection Processes for COVID-19

RDT based on  
Antigen Detection

RDT based on  
Antibody Detection

Swab Test

Nasal Aspirate

RT - PCR

Sputum Test

03

## Proposed Solution

# COVID - 19 Patient Detection Using Chest X-Ray

04

## Dataset & Experimental Setup

## Dataset

### COVID-19 Radiography Database

Source: Kaggle

Normal Patients'  
X-Ray

1341 images

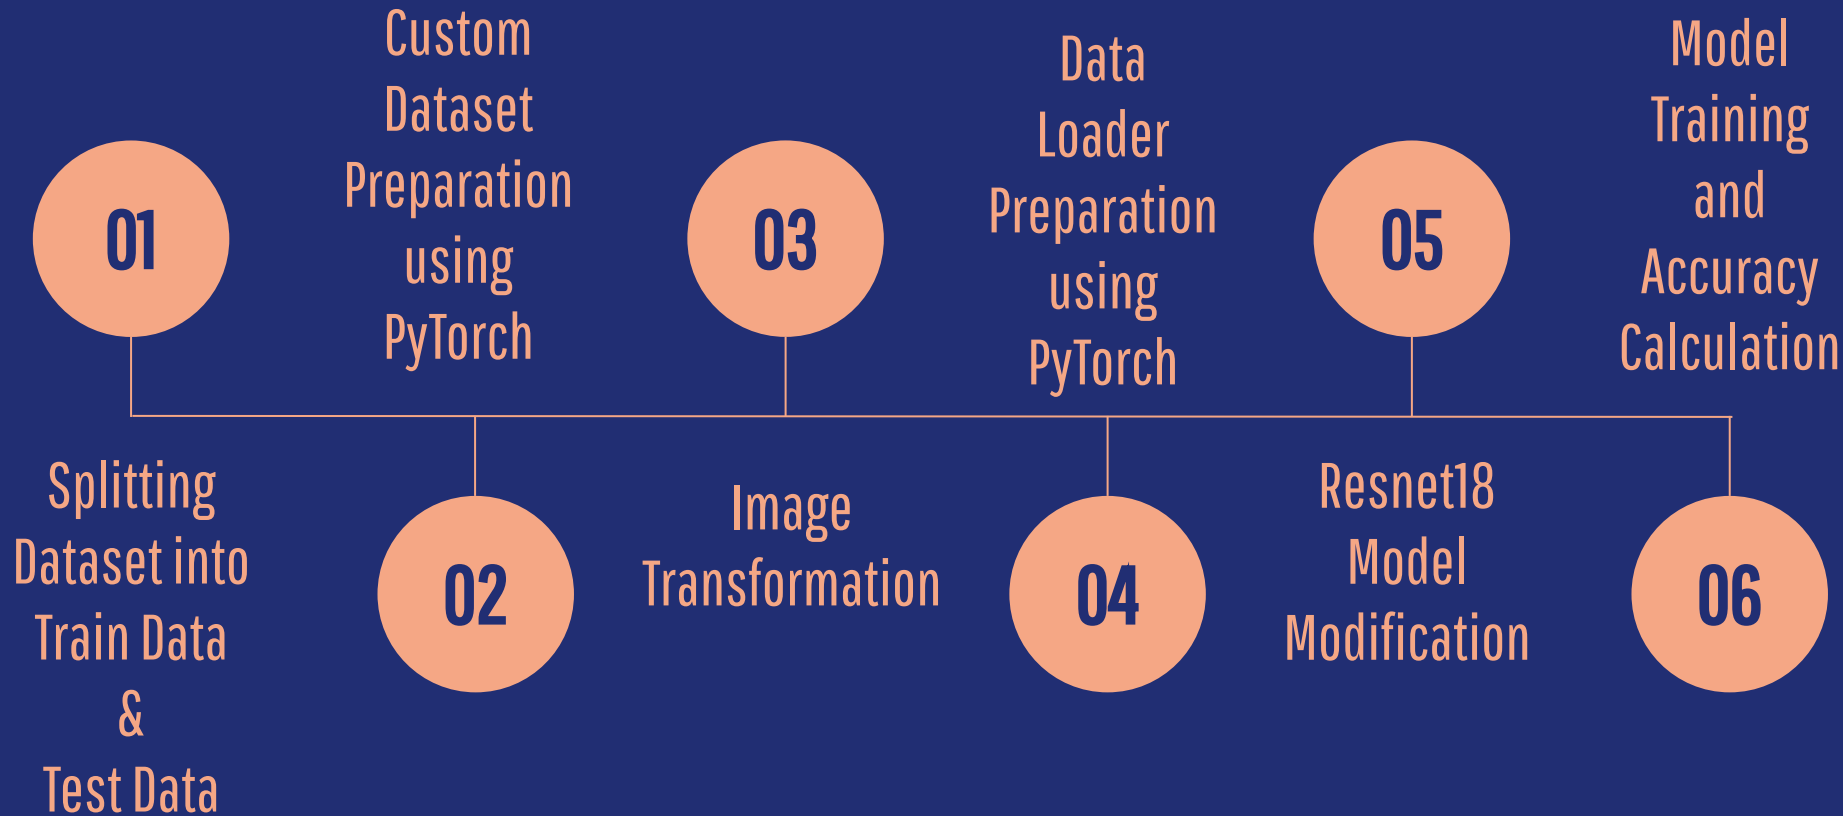

Viral Pneumonia  
Patients' X-Ray

1345 images

COVID-19  
Patients' X-Ray

219 images

# Workflow

05

# Performance

95% +  
Accuracy

06

# Challenges

# Challenges We are Facing

01

Imbalanced  
Dataset

02

Quick Mutation of  
Coronavirus

03

Probability of  
Overfitting

07

## Future Improvements

Dataset  
incrementation

Contact Tracing

# Demonstration
